dltlandscape.org

This is a living segmentation of the evolving blockchain, and distributed ledger technology (DLT) space, more broadly. Its creation was inspired by the growing complexity of this emerging market, and in particular, all the innovation happening outside the core DLT development area. This landscape both reflects and deciphers the complexity of today's vendor landscape. It includes all the Hyperledger Foundation projects - graduated and incubating - and places them in the broader market context.
