## Hyperledger DLT Landscape

This is a living segmentation of the evolving blockchain, and distributed ledger technology (DLT) space, more broadly. Its creation was inspired by the growing complexity of this emerging market, and in particular, all the innovation happening outside the core DLT development area. This landscape both reflects and deciphers the complexity of today's vendor landscape. It includes all the Hyperledger Foundation projects - graduated and incubating - and places them in the broader market context.

### Platforms
- Member Products
- Other Products
- Incubating
- Management/Operations

### Industry-specific applications and decentralized marketplaces
- Development tools/platforms
- Analytics/Monitoring tools
- Application integrations

### Smart contract languages/execution environments
- Legal contracts
- Digital token frameworks
- Digital wallets

### Network of ledgers projects
- Point-to-point and overlayer approaches

### Blockchain databases
- Distributed storage/file systems
- Artificial intelligence
- Internet of Things
- Cybersecurity

### Computing Infrastructure
- Cloud, On-premises, Orchestration

### Member Products
- Hyperledger Fabric
- Hyperledger Indy
- Hyperledger Besu

### Standards

### Services
- Consulting/Professional Services
